

APEX DYNAMICS, INC.

The Apex product ranges have been widely operated worldwide giving Apex 25 years of accumulated marketing and manufacturing experience. The vision of our group leader and his relentless investment in modern precision machinery and sophisticated test instrument. Apex manufactures every possible component in house. Mass production systems that build product for stock and immediately delivery. The commitment to quality, price and delivery is unequalled by ANY competitors. This magnificent new facility, today allows Apex the great potential to develop more new products and key core components for the industry.

DAYA 04-24521567-2011.01.2000

SC 750/950 SERIES

3 AXIS SERVO DRIVEN CNC ROBOT

- Light weight high speeds model for modern electrical injection molding machine.
- 3 axis CNC servomotor driven. Free tracking programming with pulse generator.
- Window XP base DSP control system with USB port. Easy to upload / download programs.
- All the necessary functions built in as standard. No extra charge.
- Able to storage teach program download or upload to PC through USB port.

All moving axis rides on harden tool steel rail with bearing guide. Less friction quiet smooth movement ideal for high speeds application.

Alloy aluminum extrusion arm. Thin wall design for tight mold space and high speeds take-out.

Technical Specifications

Model No.		Stroke (mm)			Max.Payload (Kg)	Net Weight (Kg)	Operating Air Pressure
		Crosswise (N)	Vertical	Traverse (I)			
SC750G	Single-stage with gripper	352	750	1020	3	180	5 bar
SC950G	Single-stage with gripper	472	950	1300	3	185	
SC750W	Single-stage with wrist	352	750	1020	3	185	
SC950W	Single-stage with wrist	472	950	1300	3	190	

Operation Voltage: AC 220V single phase

Application

14 spare inputs and 12 spare outputs for interfacing with other ancillary equipment.

1.Parts removal:

- (A) 3 Axis synchronised movement reduce complexity and cost to build end-arm-tooling.
- (B) Able to reach parts with hooks and undercuts using unconventional paths such as curves, etc.

2.Stack and array:

Each cycle can handle up to 9 stack areas with individual stack formats.

Can also place parts onto 100 points on the same surface.

3.Insert and grid:

Each cycle can place 9 different insertion materials into the mould, fed from a single point, grid pallet, or multi-station.

4.3D Path:

The robot can follow teaching point-to-point path to move.

It lets the track move smoothly and shorten the cycle time.

5.Inspection:

- Reject program: Detects signal from the moulding machine, set the reject part count and places part in different area.
- Inspection program: Places part in different area for QC inspection, for example every 100 cycles.
- Test-mould program: Allows checking of parts at the beginning of each automatic moulding cycle before cycle counter starts.
- Weight program: Checks part quality from electronic weigh scale and separates defect parts.
- Cycle counter: Counts the total number of moulding cycles. If counting good parts only, inspection cycle and defect parts are not included in count total.

Hand-Held Pendant

One key per function design is easy to use. Pulse generator manually moves the robot to designated location for safe and easy programming.

Multi-language support and conversation programming are user-friendly and guide the operator easily throughout all operations.

Each teachable program can store up to 500 steps and each step can hold 10 parallel motion sequences.

All speeds can be adjusted on a percentage scale.

SC SERIES

3 AXIS SERVO DRIVEN CNC ROBOT WITH TELESCOPIC ARM.

- 3 Axis synchronised movement CNC servo drive robot with telescopic vertical arm.
- Free tracking control programming with pulse generator.
- Rigid structure built for steady movement and precise positioning with heavy payloads.
- Multi-Function program built in as standard.

Telescopic

Single stage

Cable guide protection on all electrical wires and air hoses.

Positive servomotor drives with rack and pinion gear on 3 axis.

Rapid acceleration and deceleration reduces the cycle time, maintains positional precision, accuracy and repeatability.

SC4000DH	Telescopic	2200	4000	4800	120	2700	

Operation Voltage: AC 220V 3 phase

Equipped with AC brushless servomotors and individual control.
3 Axes can be synchronized move to designate point at the same time.
Accuracy within +/- 0.1mm.

Optional Touch Screen Pendant

- 8" Touch screen. AMD 500MHz CPU with DDR 512M Memory. Compatible with Window CE system and 512M CF memory card.
- Easy to operate with graphic symbol.
- Multiple languages can be selected.

Optional Accessories

SPI / Euromap plug

Additional vacuum generator

Pneumatic C axis rotation device on arm

End-of-arm tooling accessories

Pneumatic C axis rotation device on EOAT

C axis servo rotation device
